DETAILED ACTION***Allowable Subject Matter***

Claims 1-6 are allowed, however, claims 7-12 were cancelled after applicant elected, without traverse, Group I (1-6) not Group II (7-12) on arguments/remarks 1/26/2006.

The following is an examiner's statement of reasons for allowance:

As per claims 1-6, the claims are directed to the measurement of time differences in an idle mobile terminal after receiving a set of available cells that have been processed by a predefined selection rule and signal strengths from neighboring cells that meet the predefined threshold through a synchronization channel from a base station that serves the idle mobile. The prior art of record does not teach or fairly suggest the method "measuring, at the mobile terminal, received signal strengths of the neighboring cells having identifiers which are included in the first set of cell identifiers, with a number N of cells having a signal strength exceeding a predefined threshold constituting a set of available cells; reading, at the mobile terminal, a synchronization channel for the set of available cells, thereby measuring time differences for the set of available cells; selecting, at the mobile terminal, a second set of cells from the set of available cells using a predefined selection rule, the second set of cells including $M < N$ cells, wherein the predefined selection rule causes a non-selection of a cell having a same cell identity as another cell in the set of available cells if it is probable that the cell which is not selected and the another cell belong to one sectorized base station; and reading, at the mobile terminal, a synchronization channel for the second set of cells,

thereby measuring time differences for the second set of cells" as written in claim 1.

The prior art of Ville et al. and Padovani et al. do not teach the mobile terminal performing the measurement of time differences for the set of available cells through the synchronization channel. Also the limitation of having the second set of cells including $M < N$ cells, wherein the predefined selection rule causes a non-selection of a cell having a same cell identity as another cell in the set of available cells if it is probable that the cell which is not selected and the another cell belong to one sectorized base station.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"
